

connecting to the power supply at all times.

CONSTITUTION: The system is provided with a 1st power variable means 12 varying transmission power of a 1st transmission means 16 in response to a control signal, a 2nd power variable means 14 varying transmission power of a 2nd transmission means 18 in response to the control signal, and a power control means 26 detecting a depth of a notch in the frequency characteristic of a reception signal by the 1st and 2nd reception means 20,22 and controlling the power variable means 12,14 selected by the selection means 24 so that the depth of notch in the reception means 20,22 selected by the selection means 24 is a prescribed value or below

XRPX ACC No: N89-088373

Trapping protector with two -unit transmitter and single receiver - receives signals transmitted respectively across two test leads of rubber strip arranged to make contact when pressed together

Patent Assignee: ZIMMERMANN U (ZIMM-I)

Inventor: ZIMMERMANN U

Number of Countries: 001 Number of Patents: 001

Patent Family:

Priority Applications (No Type Date): DE 3838449 A 19881112

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
DE 3838449	A		8		

Abstract (Basic): DE 3838449 A

The receiver part (12) of the trapping protection device receives the two **transmitted signals**, and it is established whether the signal received indicates a short circuit or an interruption, and a warning signal results if such an undesired occurrence is determined. The two units (11.1, 11.2) of the transmitter, **send** out two different AC voltage **signals** and two output terminals (15.1, 15.2) give first and second AC voltage signals at the end of respective test lines.

The receiver part (12) has two input terminals (16.1, 16.2) for respectively connecting to the other ends of the test lines. A **comparator** (18) **compares** the two **signals** received taking account of the known difference between them, and gives out a warning signal, if a difference is established which does not accord with the known difference.

USE/ADVANTAGE - Protection against trapping of person or object between two moving parts. Esp. reliable protection, which as well as establishing interruptions in test leads can also do same in supply leads to system.
